AEM HEALTH CHECK & PERFORMANCE TUNING

Mitigate security vulnerabilities and optimize performance

Security and Configuration Issues Can Put Your Business at Risk

Adobe Experience Manager (AEM) provides powerful content and digital asset management capabilities. But AEM implementation and management is complex, and even the most skilled developers and security experts are apt to miss vulnerabilities that could be exploited.

Further, optimizing AEM for SEO, performance, and scalability is not always top of mind during implementation, which can lead to major headaches and poor performance down the road.

Discover Ways to Boost Security and Performance with Our AEM Health Check & Performance Tuning Program

Developed and run by a team of certified AEM experts, AEM Health Check & Performance Tuning can help you shore up security and improve performance, SEO, and scalability.

This comprehensive service is designed to uncover security and configuration issues that threaten your business. We've helped major corporations across industries discover and close loopholes that expose confidential documents, live user data, login credentials, API keys, customer and employee information, and even server details.

In addition, AEM Health Check & Performance Tuning surfaces opportunities to improve SEO, performance, and scalability, so you can make the most of your AEM investment.

AEM HEALTH CHECK & PERFORMANCE TUNING

Mitigate security vulnerabilities and optimize performance

AEM Health Check & Performance Tuning Benefits

BOOST SECURITY AND PEACE OF MIND

- Discover where vulnerabilities and misconfigurations exist—before bad actors exploit them.
- Learn about corrective actions you can take for closing security loopholes and fixing configuration issues.
- Get best practices to help you keep your system locked down for the long term.

OPTIMIZE SEO, PERFORMANCE, AND SCALABILITY

- Uncover opportunities to improve your website's SEO, so your products and services are found more easily.
- Get insights to enhance AEM site performance, focusing on challenges related to content editing, high server resource utilization, and other issues.
- Discover ways to scale your website to accommodate your future business goals.

What You Get with AEM Health Check & Performance Tuning

Informed by the latest insights and recommendations from Adobe, the outcome of AEM Health Check & Performance Tuning is a comprehensive roadmap detailing the specific steps you can take to reduce risk and make the most of your system. The process takes about a week to complete.

This service includes:

- Security scan of your AEM deployment
- Review of AEM configurations against Adobe's recommendations
- Assessment of SEO configurations and practices
- Customer interviews to understand pain points and future

business goals, focusing on your biggest needs

- Comprehensive report and roadmap including:
 - *Detailed list of systems and areas examined and findings for each*
 - *Actionable steps to mitigate security issues*
 - *Actionable steps to optimize SEO, performance, and scalability*
 - *Best practice recommendations to help you maintain the long-term health and performance of your system*
